DETAILED ACTION

Election/Restrictions

1. Claims 11-18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected claimed invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 12/06/2005.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-7 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Asla et al. [US 5,540,376].

Regarding claim 1, Asla et al. disclose an adjustable frame structure (figure 2), comprising:

- a frame (26, 40);
- two parallel tracks (28, 30) formed on the opposite sides of the frame, respectively, and at least one movable bar (32 or 34);
- wherein the at least one movable bar can move on the frame through the tracks to adjust the location of the at least one movable bar on the frame according to the size of the circuit board (figure 2).

Regarding claims 2 and 5, Asla et al. disclose a plurality of first fasteners formed on the frame (figure 2).

Regarding claim 3, Asla et al. further disclose a rolling piece (50) formed on the end of the at least one movable bar (figure 2).

Regarding claim 4, Asla et al. further disclose a plurality of second fasteners (36) formed on the at least one movable bar (figure 2).

Regarding claim 6, Asla et al. disclose wherein the at least one fastener (36) for fixing the circuit board is mounted on the at least one movable bar (figure 2).

Regarding claim 7, Asla et al. further disclose wherein a respective rolling piece is mounted on the two ends of the movable bar to roll in the parallel tracks (figure 2).

Regarding claim 10, Asla et al. disclose wherein the at least one second fastener is rotated onto the circuit board and produces a downward pressure on the circuit board to secure the circuit board.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 8-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Asla et al. in view of Ortiz [US 5,820,013].

Regarding claims 8-9, Asla et al. disclose the instant claimed invention except for the specific of rolling formed of a roller/ball.

Art Unit: 2841

Official notice is taken that it is well known to use a fastener means, such as a bolt, roller or ball to adjust and secure a holder/movable bar to a frame.

The specific type of the fastener means would have been an obvious design consideration based on the specific type of the particular fastener means intended to be used with the device.

Ortiz disclose an adjustable support for mounting a printed circuit board (figures 1-2 and 3a-3d) using at least one roller (column 6, lines 10-14, figure 3c) to adjust the printed circuit board in the frame.

It would have been an obvious to one of ordinary skill in the art at the time the invention was made to use the roller design of Ortiz in Asla et al., for the purpose of enabling adjustment the circuit board in frame.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Hunt et al. [US 5,003,254] disclose multi-axis universal circuit board;
- Jelinger [US 6,166,916] discloses an adjustable circuit board support frame;
- Cascini [US 5,067,648] discloses an apparatus for holding printed circuit board; and
- Sullivan [US 4,948,108] discloses a circuit board support device.
